Tier III Certification of Design Documents for Datatime LLC – Datatime Bishkek KR Data Center Data 5 in Bishkek, Kyrgyzstan

Dear Ian Ilnitski,

Uptime Institute Professional Services is pleased to announce the Tier Certification of Design Documents for the Datatime LLC – Datatime Bishkek KR Data Center Data 5 as fulfilling Tier III Concurrently Maintainable criteria. This Certification is based upon the design documentation submitted between 20 January 2024 and 4 March 2025.

This Certification recognizes that Datatime LLC – Datatime Bishkek KR Data Center Data 5 is capable of supporting any planned work on the site infrastructure without disrupting more than the redundant computer room power and cooling capacity. This Tier III Certification is limited by the stated total IT load of 500 kilowatts (kW) in the data hall.

Tier III Concurrently Maintainable criteria are founded on the capability to complete planned facility maintenance or modifications on a scheduled basis; equipment failures or distribution path faults may lead to unplanned outages. Certain operator errors, such as procedural errors during reconfiguration of the redundant computer room or site infrastructure equipment, may also impact the critical load.

This Tier Certification is based on the 100% design documents as submitted for review and makes no assurances as to the constructed environment. This Tier Certification is valid until the design is modified, including any changes to the capacity components or distribution paths depicted in the design identified above and submitted for review. This Certification is subject to the limitations set forth in Schedule I, attached hereto and incorporated herein.

The Tier III Certification of Design Documents award is valid until 31 March 2027 subject to the limitations and extension request process set forth in the attached Schedule I.

Congratulations on this achievement.

Sincerely,

Christopher Brown Chief Technical Officer
